No up-front cost
Deploy in days
Lower total cost
Reduced time-to-benefit
Pay as-you-grow
Painless upgrades
Simplified deployment
Always be on the latest technology
Infinite scalability
Results driven
Higher value
Lower risk
Efficient & Focused
On-demand
Managed Integration
Subscription model

Lifescape HDi gets the data out of EHRs and delivers it to analytics platforms to run intelligence on patients. Analytics engines then build reports, but how do those reports get back into the doctor's EHR?
The answer is HDi, which supports bi-directional clinical workflows.

Big Data Analytics is the key to information-based medicine, and MEDfx's Lifescape Healthcare Data Integration (HDi) Solution is essential to make it all possible.

All certified community EHRs interoperate using different standards, such as HL7, DIRECT, IHE, and eHealth Exchange, so integrating that data in-house would be a complicated, time-consuming, and expensive endeavor for an organization to undertake.

In the past, traditional integration solutions have been top-heavy with up-front labor and hardware costs, vendor support fees, and expensive maintenance and security fees; all with no guarantee of success... Until now.

What is Healthcare Data Integration-as-a-Service?
Lifescape Healthcare Data Integration (HDi) provides Integration-as-a-Service (IaaS) to enable high-performance translation of content, the orchestration of vocabulary mapping, and normalization.

HDi is a complete end-to-end healthcare data integration solution.

Its universal adapter can extract data from any vendor's source system, normalize incoming data to a standardized code set, and deliver "clean" data in the requested format, such as a single unified specification to your destination system of choice. HDi accelerates your access to standardized data and supports those strategic organizational business objectives driven by data analytics. HDi is offered in an on-demand subscription model that allows your organization to deploy within days at minimal risk.

MEDfx has deep experience in data extraction and integration services and has built HDi based upon next generation technologies. We have the solution and expertise to help meet your aggressive budget, timelines, and business needs.
